

How to Find your Computer Name

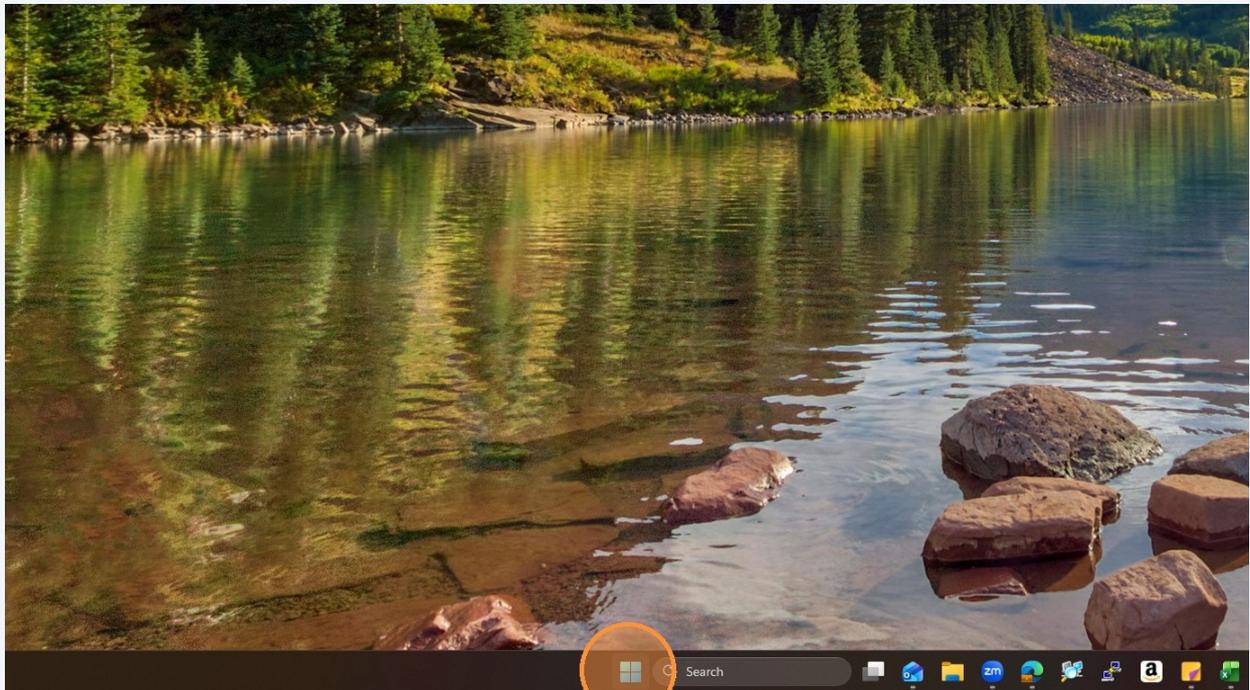

This guide provides 3 methods to locate your computer's name, which is essential for network identification and IT troubleshooting.

1

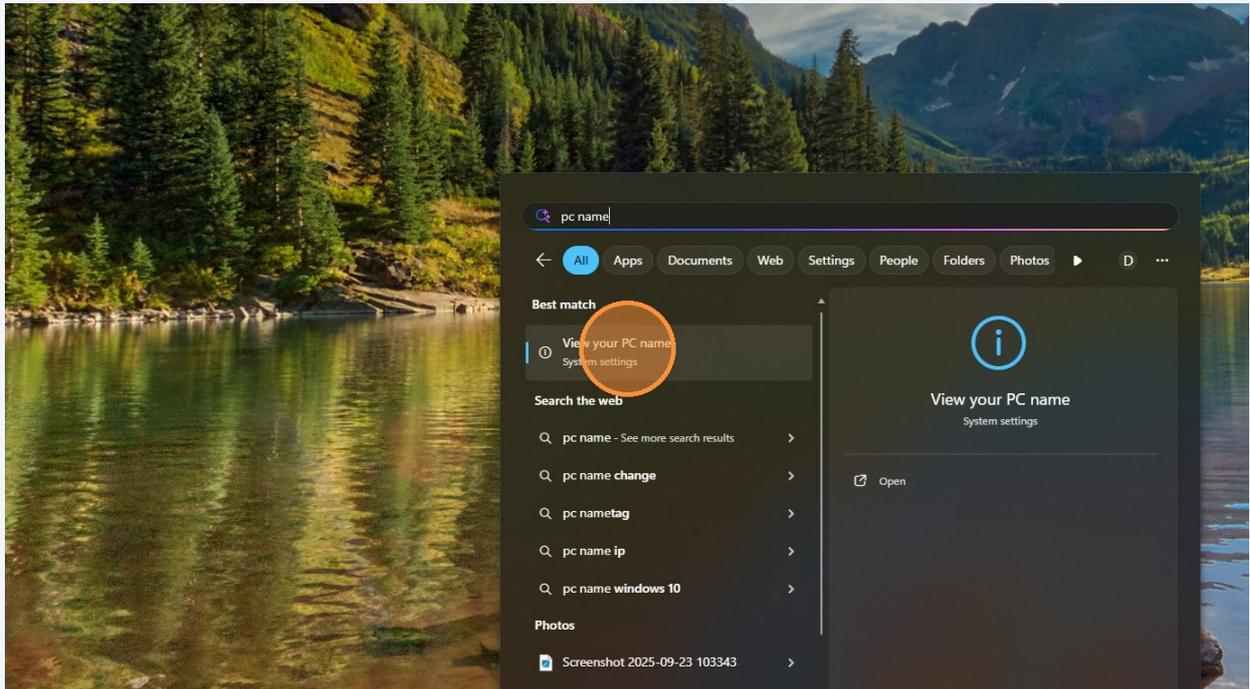

First, check for a label with an "L#####" or "C#####" on your device. If you do not see one, please proceed to step 2.

2

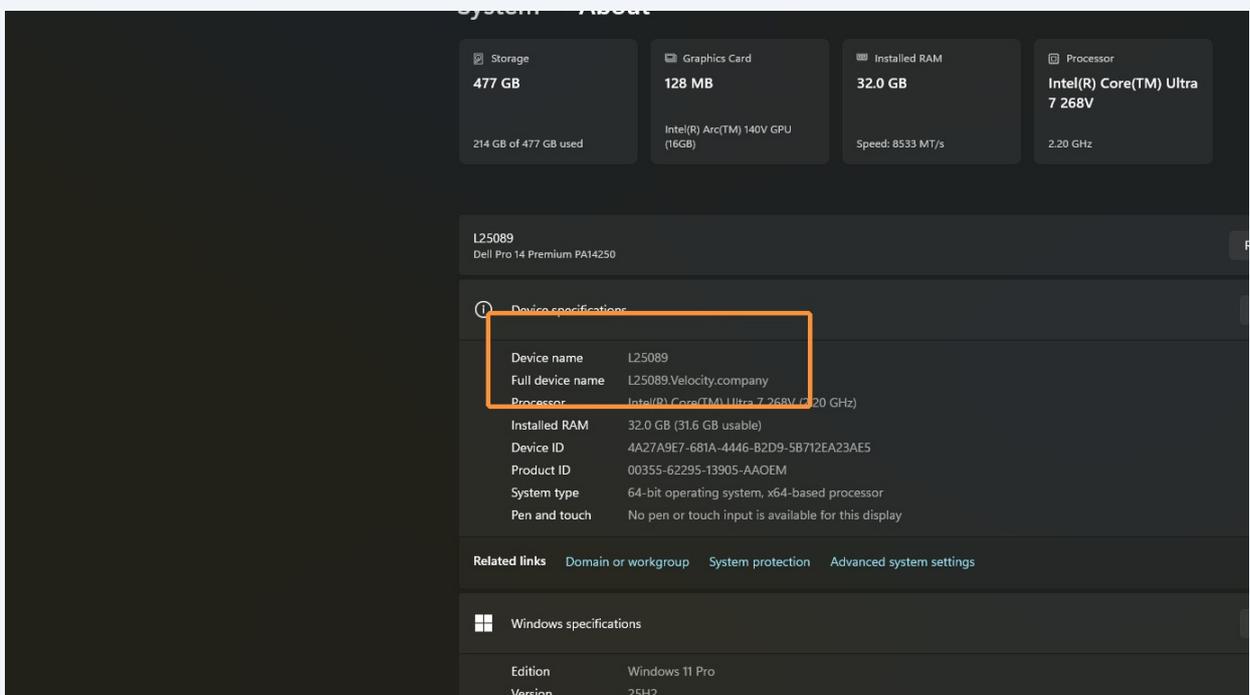

Click the Start button

3 Type "pc name" in the search bar and Click "View your PC name"

4 Under Device Specifications, you will see Device Name

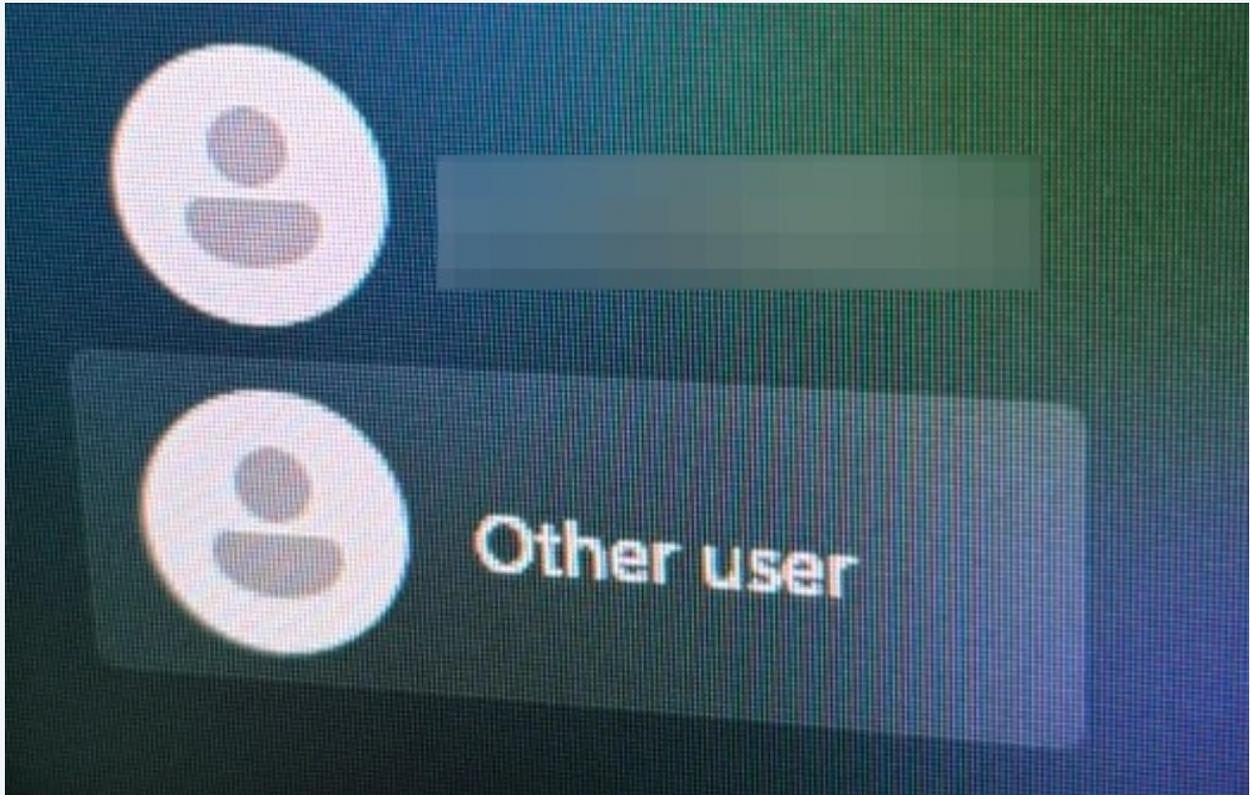

Advanced Option: If you are locked out of a PC and need the name

5

From the Log on Screen
Click "Other User"

6

Type .\ in the Username field
You will then see Sign in to: Your Computer Name
